

Project Bill of Materials

Hardware Component Specifications & Visual Inventory Reference

COMPONENT	IMAGE	QUANTITY	DESCRIPTION
Arduino UNO		1	Microcontroller for system control, processing sensor readings and managing output logic.
MQ Gas Sensor		1	Detects gas leakage and smoke concentrations with sensitive analog/digital output response.
Buzzer		1	Provides a clear acoustic sound alert sequence during critical gas threshold crossings.
LED		1	Visual status indicator that illuminates immediately upon detecting gas leakage.
Jumper Wires		10+	Multi-colored point-to-point interconnecting cables for clean solderless distribution.
Breadboard (optional)		1	Solderless breadboard layout platform optimized for stable prototyping and pin distribution.
