Fire & Flame Detection System Component Specifications

COMPONENT	IMAGE	QUANTITY	DESCRIPTION
Arduino UNO		1	Microcontroller for processing sensor data and controlling outputs
Flame Sensor Module		1	Detects presence of fire or flame via infrared light
Buzzer (Active)		1	Produces audible alarm sound when fire is detected
LED (Red)		1	Glowes as a visual alert when flame is detected
Resistor (220Ω)		1	Current limiting resistor for the LED
Jumper Wires		10+	For connecting components on the breadboard
Breadboard		1	For prototyping and component connections
USB Cable / 9V Battery		1	Power supply for the Arduino UNO
